Core competencies

Mobile IT services
Technology help delivered on site: computer setup and repair, troubleshooting, networks and Wi-Fi, backups, security basics, and getting AI tools set up safely.

Status: Offered now; no paying IT customers yet.

Software and full-stack development
Custom web applications, internal tools, automations, data pipelines, and desktop and command-line tools.

Status: Offered now; no paid software clients yet.

Private AI tools
Offline document AI that runs on a firm's own computers and shows the source page for every answer.

Status: Working prototypes; pre-revenue.

Technical training
Hands-on classes and employee sessions: command-line basics, AI-assisted development, and testing and maintaining a small internal tool.

Status: Offered; no classes or paid staff sessions delivered yet.

Registered NAICS codes

As registered with SAM.gov.

NAICS	STATUS	CLASSIFICATION TITLE
541511	Primary	Custom Computer Programming Services
541715	Secondary	Research and Development in the Physical, Engineering, and Life Sciences
541512	Secondary	Computer Systems Design Services
541519	Secondary	Other Computer Related Services
611420	Secondary	Computer Training
611430	Secondary	Professional and Management Development Training
611519	Secondary	Other Technical and Trade Schools

Registered Product Service Codes (PSC)

These are registered categories, not evidence of delivered services.

PSC	CATEGORY	OFFICIAL DESCRIPTION
DA01	IT & Telecom	Business Application / Application Development Support Services (Labor)
DA10	IT & Telecom	Business Application / Application Development Software as a Service
DJ01	IT & Telecom	Security and Compliance Support Services (Labor)
U012	Education / Training	Information Technology / Telecommunications Training
U008	Education / Training	Training / Curriculum Development
U009	Education / Training	Education / Training - General
U006	Education / Training	Education / Training - Vocational / Technical
R425	Professional Support	Support - Professional: Engineering / Technical

Differentiators

Offline by default, online by choice

TWU's own tools run offline by default and go online only when the customer wants a feature that needs it.

tiny_dancer (prototype): a 20B-parameter model on a laptop GPU

tiny_dancer is a fully offline agent built on the open-weight GPT-OSS-20B model (about 20 billion parameters). It runs on a laptop with an RTX 3070 Laptop GPU with 8 GB of VRAM. The model does not fit in 8 GB of VRAM, so the first 16 expert layers run on the CPU and the remaining expert and dense layers run on the GPU.

tiny_dancer: current status, stated plainly

The project README records 617 harness and comparison regression checks passing, and that full native qualification has not passed: a larger inventory task and an exact-money repair still fail. It is a prototype, not a delivered product.

Verify before done

The same verification habit is applied to AI output: a task is not marked done until real tests pass, and the proposed document tools are designed to show the exact source passage and page for each answer and to say so when support cannot be confirmed.

Deterministic claim verification gate

Written claims in company documents that leave the building are registered with their exact text and checked by a deterministic script against company records, with no model calls and no network. The same mechanism checks the statements on this page.

Traceable local AI work

Karl, TWU's offline LLM lab, records a JSONL trace of every generation and supports local search over PDFs, Word files, code and CSV, per its project README.

Open-source policy

Company policy recorded 2026-11-05: TWU's own software is to be released as open source under GPL-3.0-or-later. Existing public repositories carry their own licenses (Apache-2.0, MIT, AGPL-3.0).

Past performance

Past performance: none yet. TWU LLC is pre-revenue and has no federal or commercial contract history.

One federal submission is pending: an NSF SBIR/STTR Phase I Project Pitch was submitted 2026-11-05. No invitation or award has been received.

Compliance posture

What is and is not in place today.

- CMMC Level 1 self-assessment (SPRS, 17 basic security practices, self-attested): planned, not completed.
- DoD SBIR/STTR (DSIP) account: not yet created.
- No facility security clearance is held.
- No FedRAMP authorization is held.
- SAM.gov registration is active and must be renewed every year; the current renewal date is 2027-10-27.
- TWU LLC is a one-person company; the owner performs the engineering, support and teaching.

Pilot offer

Pilot offer (an offer, not a performance claim): TWU LLC will discuss a small, scoped pilot of its private document tools or related software work, with scope, schedule and terms agreed in writing before work starts.

Contact
